

PostDoc Position, German Cancer Research Center, DKFZ, Heidelberg

We are offering a postdoctoral position for

(A): Investigation of identified cancer risk genes and evaluation of genes as a putative drug targets. Expertise in investigating gene functions via siRNA or the use of siRNA as putative therapeutic tools would be helpful.

or

(B): identification of genetic and molecular (e.g. epigenetic) cancer risk factors and genetic/molecular markers influencing the clinical outcome.

A good publication record is necessary.

We are seeking a highly motivated, ambitious scientist to join our enthusiastic, interdisciplinary and international team, headed by Barbara Burwinkel, in an attractive scientific environment at the German Cancer Research Center, DKFZ, Heidelberg, Germany.

Applicants must hold a PhD in molecular biology/ biochemistry / genetics, preferably with a few years of postdoc experience and an outstanding publication record.

The position is initially available for three years.

Please send your CV, publication list, reference letters & contact information of 2-3 referees, a letter indicating prior research experience and the reference number of this announcement to:
